

Frameworks Hybrid Mobile App Development

Daniel Felipe Bueno Calderon
David Felipe Rodriguez Rodriguez
Diana Carolina Navarrete Ramírez
Miguel Alfredo Medellin Ráquira

Software Framework

“An abstraction in which software providing generic functionality can be selectively changed by additional user-written code, thus providing application-specific software.”

Mario Galindo Queralt

Ph.D. - Artificial Intelligence
Researcher and CEO at PAITI

Ph.D. - CEO at Prophet AI Trading Inc. 2013-present

Ph.D. from Polytechnic University of Catalonia Graduated 1993

“A framework is a general “*blank*” application that can be easily customized into a wide variety of specific real applications.”

Software Framework

Frameworks have key distinguishing features that separate them from normal libraries:

- ***inversion of control***: In a framework, unlike in libraries or in standard user applications, the overall program's flow of control is not dictated by the caller, but by the framework.
- ***extensibility***: A user can extend the framework – usually by selective overriding – or programmers can add specialized user code to provide specific functionality.

Software Framework

- ***non-modifiable framework code:*** The framework code, in general, is not supposed to be modified, while accepting user-implemented extensions. In other words, users can extend the framework, but cannot modify its code.

Hybrid Application

A hybrid application combines elements of both native and web applications.

- Can function whether or not the device is connected.
- Integration with a device's file system.
- Integration with Web-based services.
- An embedded browser to improve access to dynamic online content.

Native vs Web vs Hybrid

Feature	Native	Web-only	Hybrid
Device Access	Full	Limited	Full (with plugins)
Performance	High	Medium to High	Medium to High
Development Language	Platform Specific	HTML, CSS, Javascript	HTML, CSS, Javascript
Cross-Platform Support	No	Yes	Yes
User Experience	High	Medium to High	Medium to High

Native vs Web vs Hybrid

Feature	Native	Web-only	Hybrid
Device Features Access	High	Limited	Limited
Development cost	Medium to High	Medium to High	Low to Medium
Code portability	Only to specific device	Multiple Platforms	Multiple Platforms
Development time	High		Low

Native apps VS Hybrid apps

Feature	Native	Hybrid
Speed	High	Medium
Advanced graphics	Low overhead acces, provides high-quality graphics	Dependent on hybrid framework
UX/UI integration	High	Low
Access to native api's	High	Moderate

Hybrid Application

Advantage:

- Easier development approach
- Cost savings
- Low maintenance.
- Compatibility across a variety of platforms

Disadvantage:

- Limited capabilities.
- Low UX/UI integration
- Low performance.
- Internet connection.

Hybrid Application

>_

Hybrid Application

● react native ● xamarin ● Flutter ● Ionic

Colombia

react native	29 %
xamarin	25 %
Flutter	11 %
Ionic	35 %

Examples apps

Native apps

Hybrid apps

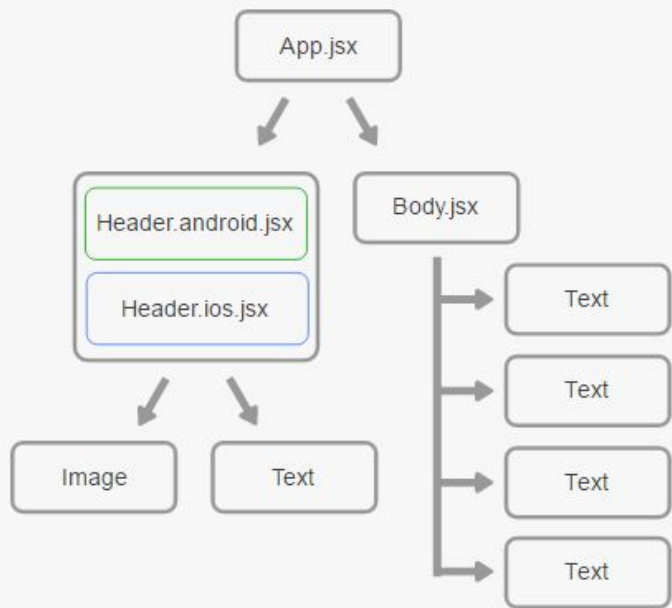

Frameworks

React Native

- Developed by Facebook in 2015
- Manage android and ios projects
- Interact with native APIs via React's declarative UI paradigm and JavaScript

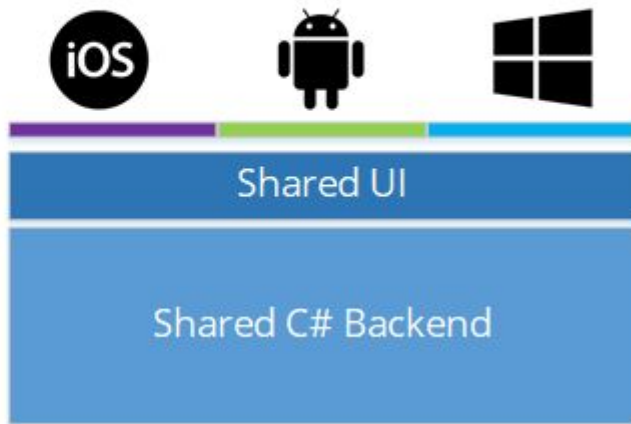

Xamarin

Traditional

Xamarin Forms

Onsen UI

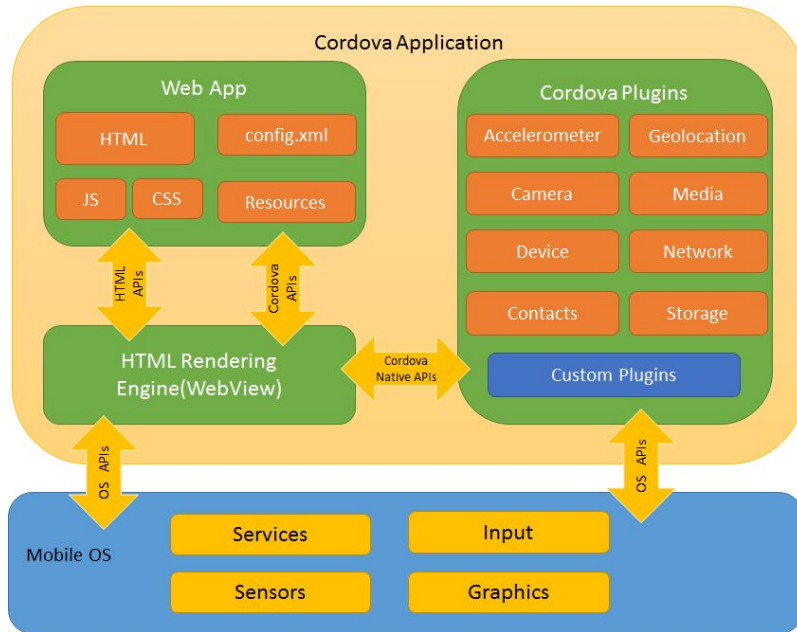

- Based in Web Components
- Compatibility with JQuery and Angular
- free and open sourced

- Template upgrading is tedious

PhoneGap

PhoneGap framework is an open source distribution of Cordova

- Managed Compilation and Signing (No SDKs)
- Multiple Supported Platforms
- Quicker Development Cycle

Mobile Angular UI

Advantages

- Comes with fastclick.js and overthrow.js
- Is that it is available for free and is also an open source framework.

Disadvantages of Mobile Angular UI :

- There are internal dependencies in Bootstrap3

好医生 (Good Doctor)

GUDA IURII

Hotelier News

iKeyBox

Mobile Angular UI is a mobile UI framework just like Sencha Touch or jQuery Mobile. If you know Angular JS and Twitter Bootstrap you already know it!

Intel XDK

Allows to create cross-platform apps

- Support Android and iOS
- Live preview with the tool
- Drag and drop tool which creates unnecessary code

Sencha Touch

Enterprise framework for creating high-performance apps closest to native experience as possible

- Has a drag a drop builder tool
- widgets ready to use

- Only for enterprise purposes
- Premium and expensive option

It is the premium choice for all the enterprise application developments

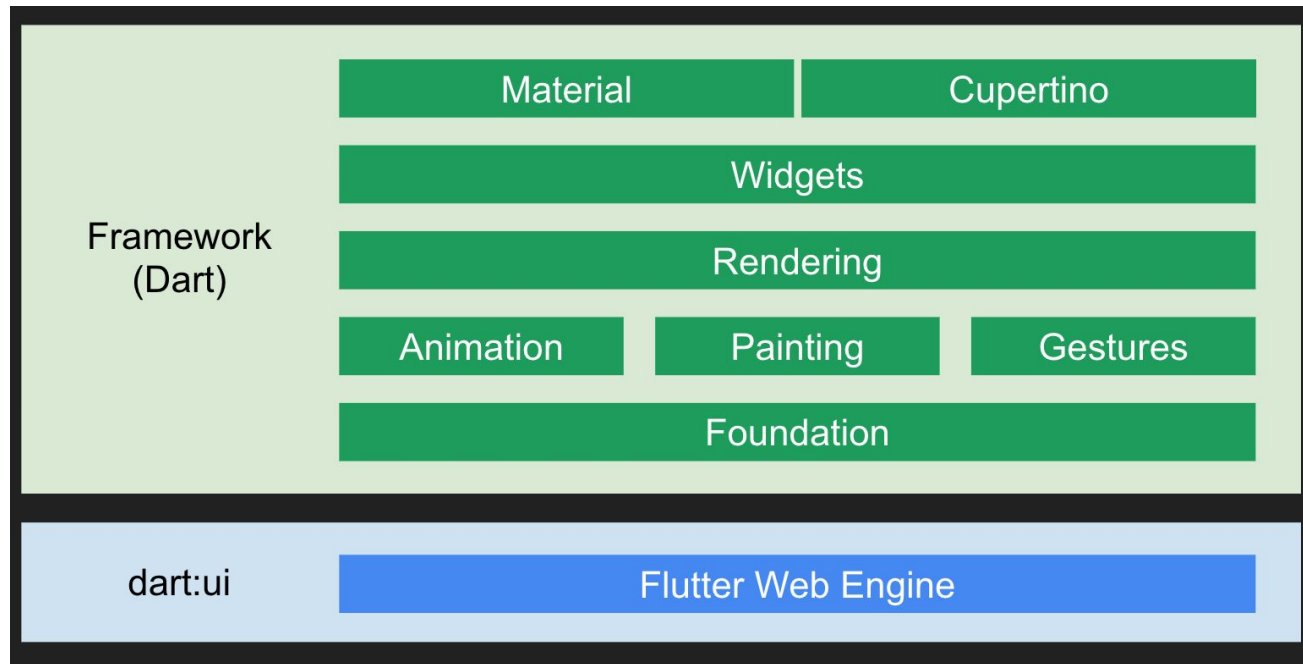

Ionic

Build with intuitive UI components that accelerate app development, and can be deployed virtually anywhere.

Flutter

Framework 7

Advantages

- Customization is very easy to achieve
- Helps in creating native applications without the external dependencies of React or AngularJS.
- Provides many UI widgets and elements that help in developing feature rich mobile applications.

Disadvantages of Framework7 :

- For any package emulation or to provide any mobile application builder, this has to be put along with either PhoneGap or Cordova
- A necessity to work with F7 MVC framework
- It is not compatible with all the possible mobile platforms.

jQuery Mobile

Advantages:

- Just write responsive websites, not native apps
- Use HTML5 tags for development
- You can modify your design easily
- Reduced sized apps
- Support most of standard JQuery events
- Support most of Web Browsers and versions

Disadvantages :

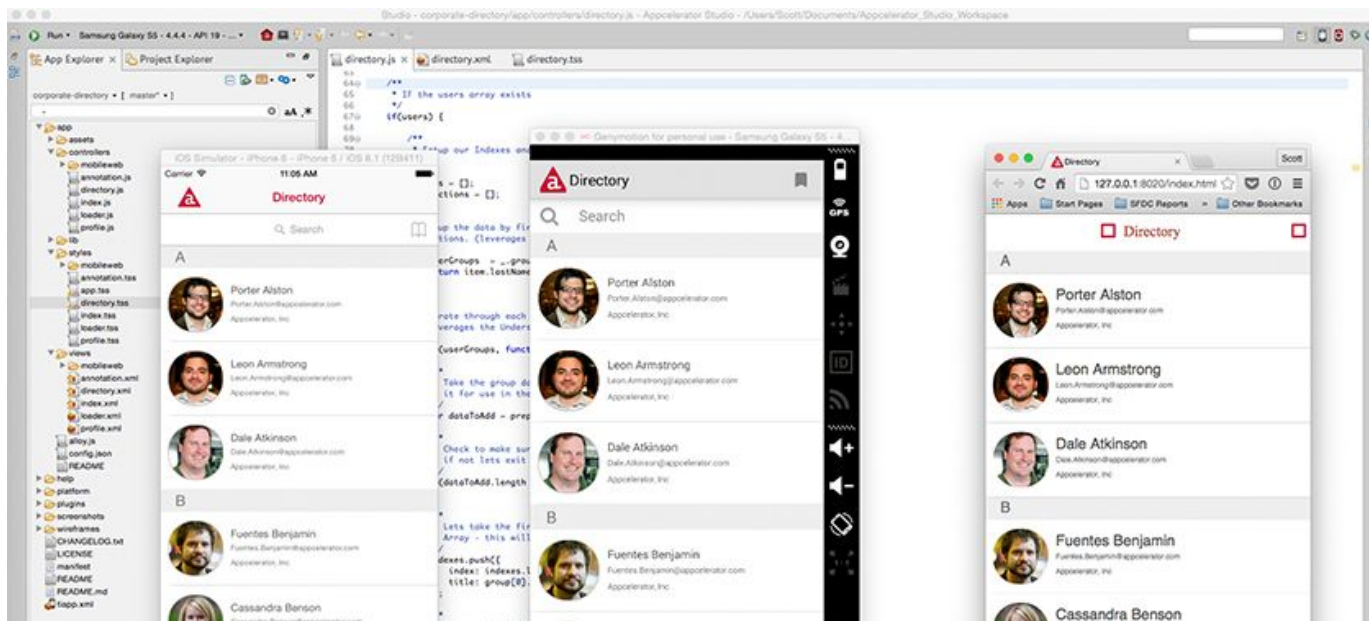

- Is not fully compatible with iOS versions later than 4.8.1
- Is not fully compatible with android versions later than lollipop

“Write less, do more...”

Appcelerator Titanium

Kendo UI

hybrid mobile application development framework which is also an HTML5 framework that is widely used for cross-platform mobile application development.

There is a strong dependency on jQuery and has around 70+ ready to use jQuery mobile app widgets from the word go

Example Framework

Install Ionic

As an asynchronous event driven JavaScript runtime, Node.js is designed to build scalable network applications.

[\[https://nodejs.org/en/about/\]](https://nodejs.org/en/about/)

```
npm install -g ionic
```

Start an app

```
ionic start myApp tabs
```

Blank app

```
$ ionic start myApp blank
```

Tabs

```
$ ionic start myApp tabs
```

Menu

Home

Friends

Events

Close

```
$ ionic start myApp sidemenu
```

Run your app

```
cd myApp  
ionic serve
```

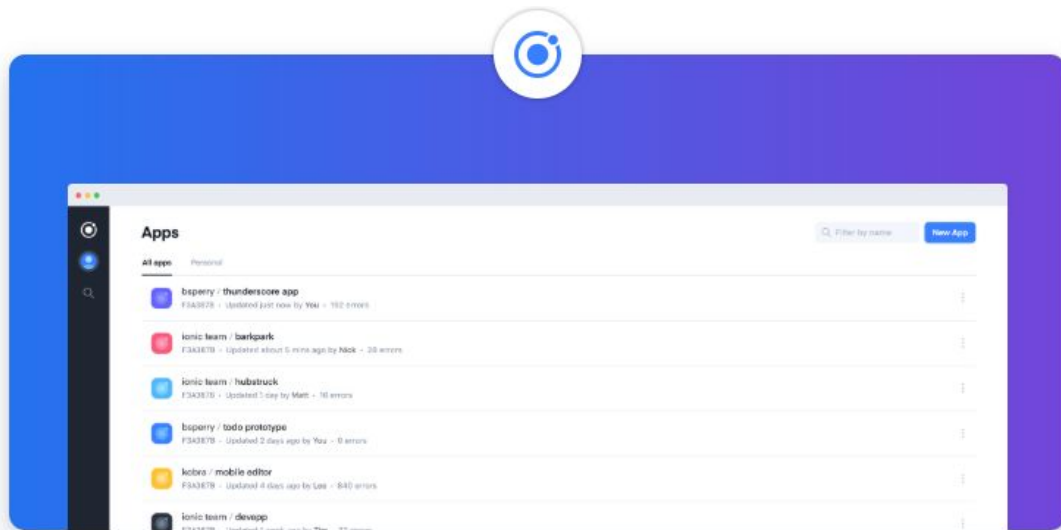

```
$ ionic serve  
> ng run app:serve --host=0.0.0.0 --port=8100  
  
[INFO] Development server running!  
  
Local: http://localhost:8100  
External: http://192.168.1.169:8100  
DevApp: StarTrack-ng@8100 on ionic-home-router.network  
  
Use Ctrl+C to quit this process  
  
[INFO] Browser window opened to http://localhost:8100!
```

Supercharge your app

ionic link

Thanks
